## Watering Instructions

**THE BEST AND FASTEST METHOD FOR PLANTS  
TO BECOME WELL ESTABLISHED**

### Important!!

Upon arriving home with your plants, commence watering immediately (where the trunk enters the pot) **EVERY DAY** until planted in the ground.

After planting, apply water to the very base (where the trunk enters the ground) **EVERY DAY** for the first four weeks.

Then for the following four weeks, apply the same volume of water every **THIRD DAY**.

### How much water should you apply?

If you purchased plants in 140mm pots, apply **ONE MUG** of water as per above method.  
If you purchased plants in 200mm pots, apply **HALF LITRE** of water as per above method.  
If you purchased plants in 250mm pots, apply **ONE LITRE** of water as per above method.  
If you purchased plants in 300mm pots, apply **TWO LITRES** of water as per above method.  
If you purchased plants in 400MM pots, apply **FOUR LITRES** of water as per above method.  
If you purchased plants in 45 litre bags, apply **FOUR LITRES** of water as per above method.  
If you purchased plants in 100 litre bags, apply **FIVE LITRES** of water as per above method.

**WARNING!**  
**All conifer  
and pines  
require only  
half of  
these  
quantities**

After the first eight weeks of above attention, the plants will be well established, however plants will do exceptionally well if mulched and kept moist at all times.

**PLANTS RETAINED IN POTS, OUTDOORS, MUST BE WATERED EVERY SINGLE DAY FOR EVER.** For example, if it rained today, then you must water the plants tomorrow.

Regular pruning of plants promotes speed, health, bushiness & vigour.

**All plants from our nursery are sold in perfect condition so we do not under any circumstances give refunds or credits.**
